What is the operating temperature range for Eaton supercapacitor modules?

The standard operating temperature range for Eaton supercapacitor modules is -40 °C to +65 °C.Temperature in combination with voltage can affect the lifetime of a supercapacitor. In general, an increase of ambient temperature by 10 °C will decrease the lifetime of a supercapacitor by a factor of two.

What are energy storage capacitor specifications?

Capacitor specifications of capacitance,DC leakage current (DCL),equivalent series resistance (ESR),size,etc. are typically room temperature measurements under a very specific test condition. Furthermore,energy storage capacitors will often be set up in some parallel/series combination that can pose unique challenges or unexpected behaviour.
