and 2020, China's dependence on foreign trade fell from 47.3% to 31.7%, continuing a trend that first emerged in 2006 when China's reliance on foreign trade peaked. In four of the past nine years, domestic demand has ...

It also demonstrated the technical and economic viability of hydrogen energy vehicle application in cold environments, which is a key limitation in new energy vehicles powered by lithium batteries. Automakers ...

In 2023, research teams from both the United States and China independently observed the fractional quantum anomalous Hall effect. The conventional approach for studying the quantum Hall effect in experiments involves utilizing the existing structure and properties of specific materials to prepare the quantum Hall state, which requires ...

Official data show that China's lithium-ion battery industry achieved robust growth between January and October 2024, with national battery production hitting 890 gigawatt ...

Energy in China's New Era. The State Council Information Office of the People's Republic of China. December 2020. Contents. Preamble ... It has accelerated the construction of pumped-storage power stations, built natural gas peak-shaving ...

By LI Linxu. Thanks to policy and sci-tech support, China keeps leading the world in renewable energy power generation. The country's installed capacity of renewable-energy power generation reached 1.002 billion kilowatts by the end of October, ranking first in the world, according to the latest data from the National Energy Administration (NEA) released on November 20.

In March, EVE Energy Co., Ltd, one of China's leading lithium-ion battery manufacturers, broke ground on a 10-billion-yuan battery production base in Tiexi. The project ...

A view of the assembly line of electric vehicle manufacturer Li Auto in Changzhou City, Jiangsu Province, December 10, 2023. (CFP file photo) Jiangsu Province has recently unveiled a strategy to bolster the high-quality ...

The High-tech Research and Development Center under the Ministry of Science and Technology released China's top ten scientific advances of 2021 on Monday, including "quantum walks on a programmable two-dimensional 62-qubit superconducting processor

* With total installed capacity of renewable energies reaching 1,213 gigawatts in 2022, China has become a global leader in utilizing green and low-carbon energy sources. ... revealed that by the end of last year the proportion ...

In March 2021, the Zhaoqing Power and Energy Storage Battery Project (Phase I) of CATL was officially launched. As the largest industrial project in Zhaoqing, it will invest RMB 12 billion during the first phase of the project to ...

China's lithium-ion battery industry sustained rapid growth in 2022, official data showed. The total output of lithium-ion batteries exceeded 750 gigawatt-hours (GWh) last ...

| 2022-02-10 : 210(≈)210,?? ...

China needs to build a first-class support platform to make quantum precision measurement breakthroughs in fields such as navigation, medical examination and scientific research, and develop important measurement equipment. At the session, Xi also stressed the importance of enhancing international cooperation in quantum science and technology. ...

As of May 4, the cumulative power generation capacity of these hydropower giants, established and operated by state-owned power company China Three Gorges Corp. (CTG), is equivalent to saving about 910 million ...

This year, the International Energy Agency (IEA) published its Global EV Outlook report under the title "Moving Towards Increased Affordability." It noted, "A rapid transition to EVs (electric vehicles) will require bringing to the ...

China's renewable energy industry continued to lead globally in 2022, National Energy Administration official Wang Dapeng said on Monday. China-made photovoltaic modules, wind turbines, gear boxes and other key components accounted for 70 percent of the global market share ... In 2022, China's renewable

energy generation was equivalent to a ...

From liquid lithium batteries to semi-solid lithium batteries, from Qilin batteries that can deliver a range of 1000 kilometers on a single charge to the 800V high-voltage SiC ...

China-EU green energy partnership drives sustainable development across borders o China Energy revs up production, highlighting clean energy shift o China takes the lead on the renewable energy push o Chinese premier ...

Chinese wind and solar products have been exported to over 200 countries and regions worldwide, helping developing countries access clean, reliable, and affordable energy. ...

In the first half of 2022, China's auto exports rose 47.1 percent year on year to nearly 1.22 million units. The exports of new energy vehicles (NEVs) have embraced explosive growth since 2021. Last year, the country exported ...

A t an appointed moment during Beijing 2022 Olympic Winter Games opening ceremony at the National Stadium in Beijing on February 4, 2022, a special snowflake cauldron with an ignited Olympic torch was lifted up. Unlike previous Games, this torch was not using liquefied natural gas or propane as its source of fuel, but rather hydrogen energy. The torch ...

Preface Report on Foreign Investment in China 2022 I. USD 32.29 billion, accounting for 18.6% of total foreign capital absorbed by the whole country. The foreign capital actually utilized by 230 national-level economic and technological development zones increased by ...
