

What is the Miyota 9015 movement?

The Miyota 9015 movement is part of Citizen Watch Company's renowned Miyota Caliber 9000 series. Launched in 2009, the 9015 quickly gained popularity among watchmakers for its blend of precision, slim profile, and cost-effectiveness.

Is the Miyota 9015 good?

While the Miyota 9015 is highly regarded, it does have a few shortcomings: Rotor Noise: Some users report that the rotor can be relatively noisy during movement, which might be noticeable in quiet environments. Date Setting: The quickset date function can sometimes be a bit stiff, requiring more effort to change the date.

Does the Miyota 9015 have a date function?

Hacking: Both movements have a hacking feature. Hand-winding: Both movements allow for hand-winding. Date Function: Both movements include a date function. The Miyota 9015 is used in a variety of watch models, especially those from independent and microbrand watchmakers. Some well-known models featuring the 9015 include:

Does the Miyota 9015 have any plastic parts?

The Miyota 9015 contains exactly zero plastic parts, just like the ETA movements, and unlike many other Japanese movements. If I had not known that this was a Miyota, I would have thought it was a new ETA prototype as it is also thinner and overall looks and feels more modern.

Is the 9015 a good watch?

But as many others have stated, the 9015 is an accurate movement. My Sellita is a tad noisy while winding it up with the crown compared to my Miyota that is as quiet as a mouse when winding with the crown. I can't compare it to an ETA yet as my first ETA based watch will arrive in December. It's not so much the movement, it's the regulation.

What is a Miyota 9015 watch?

The Miyota 9015 is used in a variety of watch models, especially those from independent and microbrand watchmakers. Some well-known models featuring the 9015 include: Setting the time and date on a watch with the Miyota 9015 movement is not complicated: Pull the crown out to the first position. This allows you to set the date.

Does anyone know a reasonable cost to service/overhaul a new rep with Miyota 9015 movement? The watch is not keeping time nor holding the charge for more than 3 hours. I've been quoted \$150 US, seems a bit high to me, so not sure if this is the right price, or if I need to keep looking. efajri Respected Member. 17/10/16

Whether those movements were Swiss-made or not was a matter of indifference to them. It was in response to that demand that MIYOTA set about developing a thin premium mechanical movement capable of becoming a new industry ...

Anyway, my question is, if the 9015 movement needs to be replaced, does that affect the water resistance on the watch and will it need a pressure test? Second question, if the original 9015 movement isn't working, a swap out should have the watch working good as new, right? Thanks a lot in advance!

The Seiko caliber 9T82 (actually marked 9T82A) is a kinetic movement found in Seiko Sportura chronograph watches. This 38 jewels movement is hand-finished and assembled by Grand Seiko level master watchmakers at the Shinshu ...

It does have a scent of cheapness but otherwise does not impair the movement. I haven't had issues with 9015's with accuracy more often than not <10spd. Does its job, workhorse movement nothing more. Rotor noise aside in comparison to the 2824 (the reference standard) the 9015 does not wind as smooth nor does date change as precisely.

Based on the inquiry regarding the Miyota movement's power reserve, it is essential to note the following key insights: 1. The Miyota 8215 model typically stores up to 40 hours of power, 2. I have a watch with the Miyota 9015 movement. I watched a couple of videos and read some posts about how to regulate the movement, which is a simple enough procedure: you just move a small arm with two gold dots on it one way or the other, and the watch will go slower or faster. People who have done it said that it's a pain in the ass because ...

The 8215 does not hack by pulling the crown and has a beat rate of 21,600 beats per hour I believe the 9015 is scheduled for release this fall, and the watches I know of that will be using this movement is the Benarus Moray II, NFW Viperfish, Red Sea Dive watches, and Android watches will be using the movement too.

A nice feature of the Miyota 9015 is that it doesn't contain any parts that are tricky to handle, so in this respect it is a straightforward movement to service. However, it contains ...
