Are battery storage investments profitable for small residential PV systems?

For an economically-rational household, investments in battery storage were profitable for small residential PV systems. The optimal PV system and storage sizes rise significantly over time such that in the model households become net electricity producers between 2015 and 2021 if they are provided access to the electricity wholesale market.

Are energy storage services economically feasible for PV power plants?

Nonetheless, it was also estimated that in 2020 these services could be economically feasible for PV power plants. In contrast, the energy storage value of each of these services (firming and time-shift) were studied for a 2.5 MW PV power plant with 4 MW and 3.4 MWh energy storage. In this case, the PV plant is part of a microgrid.
