What are ABB automatic transfer switches?

ABB offers automatic transfer switches (ATS) ranging from 40 to 1600 Amperes. They are suitable for diverse applications such as industrial plants, docks, airports, and data centers.

What types of enclosed change-over and transfer switches does ABB offer?

Aware of the importance of a secure power supply, ABB offers a wide variety of Enclosed change-over and transfer switches from 40 to 1600 Amperes. ABB's range includes switches to transfer a load from one power source to another manually, remotely or automatically. These types of switches are commonly used between two systems.

What are ABB switches used for?

ABB's switches are designed for flexibility and reliable performance in a wide variety of applications: power distribution for residential and industrial buildings, HVAC, water pumping stations, data centers and photovoltaic installations. Are you looking for support or purchase information? Keep your environment cool!

What are the ZTX series automatic transfer switches designed for?

Zenith ZTX series automatic transfer switches, ranging from 100 to 1200 A, are designed for use in residential, commercial, & light industrial low voltage automatic transfer switch applications.

Does ABB have a power grid?

ABB's Power Grids business will be divested to Hitachi in 2020. ABB operates in more than 100 countries with about 144,000 employees. A normal power source provides power to all loads for an indefinite long time. The power is provided by the utility network. One unit, One wire - just like an ATS should be. Saves up to 60 meters of wire.

What is ABB compact ATS?

For residential, commercial, industrial and agricultural structures. The IEC 60947-6-1 tested devices fulfil the requirements of Part 6-1, making them multiple function apparatus. ABB Compact ATS is a safe and approved solution for any application where a source transfer device is required. Typical end use applications: ABB Compact ATS devices work best

to achieve automatic transfer switching, the installation can be fitted with an automatic transfer Switch (ATS) (available in versions 021 and 022) featuring microprocessor-based technology. If the main line is lost, this device can control generator startup and can handle switching from one network to another by means of the commands

In addition to the scalable AC500 control unit, ABB has also change-over components such as connectors, interrupters, cutouts, power switches, relays, motor-protection switches, and high performance automatic
