As of 2019, the maximum power of battery storage power plants was an order of magnitude less than pumped storage power plants, the most common form of grid energy storage. In terms of storage capacity, the largest battery power plants are about two orders of magnitude less than pumped hydro-plants (Figure 13.2 and Table 13.1).

Energy Storage in our Clean Energy Plans Beyond these projects, storage is moving forward in our energy plans on a smaller scale. In Pueblo, Colorado, the Neptune and Thunderwolf Energy Center -- two cost-effective large-scale solar projects each combined with four-hour battery systems -- began delivering energy to the grid in summer 2023.

The emergence of electric vehicle energy storage (EVES) offers mobile energy storage capacity for flexible and quick responding storage options based on Vehicle-to-Grid (V2G) mode [17], [18]. V2G services intelligently switch charging and discharging states and supply power to the grid for flexible demand management [19].
