5. Conclusion and perspectives Absorption thermal energy storage is promising for the storage of solar energy, waste heat and etc. Due to its superior properties including high energy storage density and small heat loss during long-term storage, the absorption thermal energy storage has been extensively studied in the last few years.

Can absorption thermal energy storage be integrated with absorption heat pump?

In the Royal Institute of Technology, Sweden, integrated absorption thermal energy storage with absorption heat pump based on KOH-H₂O theoretically studied, and energy storage density of 220 kWh/m³ could be obtained.

What are the basic sorption thermal energy storage systems?

Basic sorption thermal energy storage systems. The absorption thermal energy storage process is mainly accompanied by the transportation of sorbent in a closed system as depicted in diagram 4 of Fig. 1, which is convenient for good heat transfer, .

What is sorption heat storage?

Prototype performance and experimental conditions are specified and compared. Sorption heat storage has the potential to store large amounts of thermal energy from renewables and other distributed energy sources. This article provides an overview on the recent advancements on long-term sorption heat storage at material- and prototype- scales.

What are the different types of absorption thermal energy storage systems?

Depending on the system and the required output, different external tanks could be used. The integrated absorption thermal energy storage with a conventional system classified into two based on the input energy: low-grade energy-driven system and high-grade energy-driven system.

What is an integrated absorption thermal storage system?

Integrated absorption thermal storage system with internal compressor and working pairs. The pair is stable at a temperature up to 160 °C, but it requires rectification. The viscosity is very high and the absorbate may decompose at 110 °C, but with the three steps an energy density of 180 kWh/kg could be achieved.
