When will aluminium be used for energy storage?

Although it is possible that first systems for seasonal energy storage with aluminium may run as early as 2022, a large scale application is more likely from the year 2030 onward.

What is the energy storage capacity of aluminium?

Energy storage capacity of aluminium Aluminium has a high storage density. Theoretically, 8.7 kWh of heat and electricity can be produced from 1 kg of Al, which is in the range of heating oil, and on a volumetric base (23.5 MWh/m³) even surpasses the energy density of heating oil by a factor of two. 4.2. The Power-to-Al process

What is the feasibility study of aluminum based energy storage?

To provide the correct feasibility study the work includes the analysis of aluminum production process: from ore to metal. During this analysis the material and energy balances are considered. Total efficiency of aluminum-based energy storage is evaluated. Aluminum based energy generation technologies are reviewed.

Are aluminum-based energy storage technologies defensible?

The coming of aluminum-based energy storage technologies is expected in some portable applications and small-power eco-cars. Since energy generation based on aluminum is cleaner than that of fossil fuel, the use of aluminum is defensible within polluted areas, e.g. within megapolises.

Is aluminum a good energy storage & carrier?

Aluminum is examined as energy storage and carrier. To provide the correct feasibility study the work includes the analysis of aluminum production process: from ore to metal. During this analysis the material and energy balances are considered. Total efficiency of aluminum-based energy storage is evaluated.

Can aluminum be considered a perspective energy carrier?

So, aluminum can be regarded as perspective energy carrier and has a good chance for large-scale integration in global energy storage. To provide the correct feasibility study this work will be started from aluminum production process analysis, which will examine the whole chain: from ore to metal.
