The findings were published Tuesday in the scientific journal Nature Communications.

Can a smart brick store energy?

Brick has been used in walls and buildings for thousands of years, but rarely has been found fit for any other use. Now, chemists in Arts & Sciences have developed a method to make or modify "smart bricks" that can store energy until required for powering devices.

What is a smart brick with integrated energy storage?

The concept of a smart brick with integrated energy storage is shown in Figure 1. First, we fabricated the electrode to be placed in the brick insulating space. Graphene PLA filament was used to create 3D arc-shaped electrodes, which were then integrated with the brick for a smart house energy storage application.

How are bricks stored in a building?

The bricks are stored side by side within the building, like dominoes jammed together. Before they're raised or lowered, a trolley system hefts each brick and trundles it to the elevator. Bricks are housed on the top eight levels of the building to store energy and drop down to the corresponding lower eight levels to generate power.
