

Is energy storage a good option for commercialization?

The evaluation for the benefit of energy storage is necessary to realize its commercialization. At present, government organization, research institution, industry association, consulting company and public service corporation over the world have all carried on a series of research on the benefit of energy storage.

How will res' grid connection affect energy storage demand?

And the pressure of RES' grid connection will also force the acceleration of wind-solar energy storage. It is predicted that with the continuous development of smart grid and RES' grid connection, energy storage demand during the "13th Five-Year" will further arise and reach to 50 billion yuan in year 2020 .

How much does energy storage cost?

Calculated by Guotai Junan Securities in October 2013. The target cost for the marketization of energy storage industry was about 200 dollars/kW h, equivalent to 1246 yuan/kW·h. However, at present, the cost of PbAB is about 1000 yuan/kW·h and the cost of NaS battery, LIB is about 4000 yuan/kW·h.

Why are China's energy storage devices mainly installed in the demand side?

China's energy storage devices are mainly installed in the demand side with the proportion of 46% and most of them are DG and micro-grid projects. One reason is that China's large electricity demand brought by the large population and growing economy leads a big peak-valley difference.

How to improve energy storage technology?

First of all, quicken the pace of establishing basic standards and revising the existing standards. Technology standards, design specifications and other requirements are of the basic standards of energy storage technologies. At present, some relevant standards for corporations and industry have been established and published.
