What is home energy storage?

Home energy storage involves using a system to store energy for later use. You can store different types of energy, for example heat, but the most common type of home energy storage system uses a battery to store electricity. This article will concentrate on this type.

What is a home battery energy storage system?

The idea with a home battery energy storage system is that you'll be able to charge it up using either your own electricity generated from solar panels or from cheap energy acquired from the grid. Once stored, you'll use this lower cost stored energy to power appliances in your home.

Why is home energy storage so popular in the UK?

With energy bills soaring and people getting tired of relying on fossil fuels, home energy storage is experiencing a growth in popularity in the UK. These storage systems, most likely in the form of lithium-ion batteries, are also becoming an important component in enabling our transition to cleaner, greener energy.

Can you store energy without solar panels?

Yes, you can store energy without solar panels. It's not as effective as using a storage battery with solar PVs, but it can still be done. Essentially, a battery can store energy from any source. Be it energy generated from solar and wind or coal and gas.

Can solar panels and battery storage save you money?

Some estimates suggest that solar panels plus battery storage can reduce your annual electricity bill by up to 70%. In fact, our calculations show that a battery storage system can save you around £800 a year. This is because battery storage with solar PV allows you to maximise the use of your own generated energy.
