How does a solar storage system connect to a house?

A solar storage system connects to a house in two main ways: DC (direct current) coupled or AC (alternating current) coupled. DC-coupled battery storage systems are integrated into your solar system, with a single inverter converting DC electricity to AC to supply your house or feed back into the grid.

How long does it take to install a battery storage system?

The installation process for a battery storage system is usually very straightforward and only takes around 1-2 days (unless you are having a large system installed).
