

China and Europe work together to store energy

Why does the EU cooperate with China?

The EU and China are jointly responsible for one third of the world's final energy consumption. The EU's energy cooperation with China thus focuses on supporting both sides' clean energy transition, a prerequisite to successfully implement the Paris Agreement and to provide their citizens with clean, sustainable and affordable energy.

How can China and European countries support energy transition?

Further efforts are needed to heighten collaboration between China and European nations in key areas of energy transition including decarbonization of power generation, renewable energies, sustainable recycling and the use of essential mineral resources to support global green development, said a recent report.

Does the EU still want EV cooperation with China?

Given the EU's current focus on energy supply and pricing security due to the Russia-Ukraine conflict, the EU still has an interest in energy cooperation with China but it wants to ensure minimal disruption to Europe's pricing and supply systems in the energy industry," said Zheng. "Take EV cooperation as an example.

What does the EU & China Partnership do?

In energy, the partnership works on topics such as promoting energy efficient buildings, researching energy technologies, and finding ways to integrate renewable energy into urban areas. The EU and China share common interests and goals for the clean energy transition.

What is the relationship between the EU and China?

The EU and China share common interests and goals for the clean energy transition. China produces and uses more energy than any other country. Energy developments in China therefore have a big impact on global energy markets, as well as on the amount of greenhouse gases released into the atmosphere.

How can China and Europe improve cooperation?

To address these challenges, Yu advocated for the promotion of city-to-city cooperation between China and Europe, highlighting China's robust cost-cutting capabilities in sectors like hydrogen-based green fuels, transportation and decarbonization.
