

What is energy management of ships?

Stringing together high-frequency keywords, it can be seen that energy management of ships is mainly about design selection, management, simulation and verification of the performance of ship power (propulsion) systems considering new energy devices such as hybrid energy storage and fuel cells to achieve energy saving and emission reduction.

Can energy-saving technologies save the cost of shipping?

The use of effective energy-saving and emission reduction methods in the shipping process can save the cost of shipping. As the price of oil on ships continues to rise, energy-saving technologies for ship power stations and electrical equipment have attracted widespread attention.

Is ship Energy Management a key technology for coordinating energy sources?

Energy management as a key technology for coordinating the efficient working of all energy sources on board ships has become a focus of research. Firstly, this paper visualises and analyses the literature in this field by CiteSpace to clarify the development trend of ship energy management.

What are the main targets of research into ship energy management?

It can be seen that the main targets of research into ship energy management are all-electric or hybrid ships. The focus of the clustering themes is on intelligent optimisation methods, control of DC microgrids (power systems), ship propulsion systems and power scheduling.

How can green ships improve China's marine environment?

In today's era of advocating green and low carbon, the development of green ships based on new technologies and new energy can improve the status of China's shipping enterprises in the world. Specifically, such development is of great significance to marine environmental protection and can promote the sustainable development of China's economy.

Is ship energy management feasible?

For feasibility: the hotspot analysis shows that the current research on ship energy management focuses on theoretical analysis. Most scholars use optimisation algorithms to implement energy management and use software simulations to verify its feasibility, which still leaves a big gap for ship applications.

As for developing countries, the environmental effects of China's energy-saving policies, including new energy demonstration city policy and coal-to-gas policy, are examined by Yang et al. (2020a) and Wang et al. (2023), respectively. The previous studies provide macro-level evidence for the environmental effects of energy-saving policies ...

In 2019, the innovative energy-saving technology developed by CMES-Tech under the 703th Research

Institute of China Shipbuilding Industry Corporation (CSIC) ----Air Layer Drag ...

Hydrogen energy, due to its clean and efficient nature, has shown great potential during the current transition period in the shipbuilding industry. However, the application of ...

The world is rapidly adopting renewable energy alternatives at a remarkable rate to address the ever-increasing environmental crisis of CO2 emissions....

China has sped up the transformation to green, recycling and low-carbon industry, and implemented green manufacturing on all fronts; put in place monitoring, law enforcement and diagnostic mechanisms for energy ...

China steps up new energy storage construction. New energy storage, or energy storage using new technologies, such as lithium-ion batteries, liquid flow batteries, compressed air and ...

To accomplish profound decarbonization, exemplified by the ambitious Net-Zero Emissions (NZE) goal [3], extensive adoption of renewable energy sources necessitates effective energy storage solutions, with hydrogen emerging as a prominent chemical storage alternative [4], along with Carbon Capture & Storage (CCS) for sectors that are challenging ...

This article aims to study energy-saving measures in modern ship design, construction, and shipping management. The energy consumption of the shipbuilding industry has always been ...

Vessel Energy Storage System Market Size (2024-2029): The Global Vessel Energy Storage System Market size is estimated at USD 1.2 billion in 2023 and is anticipated to reach a valuation of USD 9.94 billion by 2029 and is predicted to register a CAGR of 42.2% during 2024-2029..

,! ,: (1): ...

A hybrid solar/wind energy/fuel cell ship power system model is constructed for ships, and a hybrid solar/wind energy power supply and hydrogen production model is ...

China has strengthened oversight over energy-saving law enforcement, reinforced operational and post-operational supervision, and exercised strict accountability for law enforcement to ensure the effective ...

Energy storage, both in its electric and thermal forms, can be used both to transfer energy from shore to the ship (thus working similarly to a fuel) or to allow a better ...

South China Morning Post - October 19th 2012. With the importance of a green, sustainable future, it's high-time to bring sails back on ships. Focused on designing eco-friendly power and propulsion systems for ...

China niue energy saving ship energy storage

In recent years, research into ships has focused on reducing emissions, consuming less energy, and being more efficient. As a result, the maritime industry has been continuing in a green and sustainable direction. ...

ABB's Containerized Energy Storage System is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and converters, transformer, controls, cooling and auxiliary equipment are pre ...

Research on Energy-Saving Technology of Ocean-Going Ship Electrical Equipment Xinyu Zhu* School of Wuhan University of Technology, Wuhan, China Abstract. In recent years, my country's high-tech technology has shown an unstoppable development trend, which has promoted the application of ... 4 Energy saving of food cold storage system for ocean ...

Abstract: The energy storage system is an essential piece of equipment in a ship which can supply various kinds of shipboard loads. With the maturity of electric propulsion technology, all-electric ships have become the main trend of future ship design. In this ...

The IMO has long been aiming to curb the emissions from operational ships, especially the mandatory Energy Efficiency Regulations for Ships, including the EEDI for newly-built ships and the SEEMP for all ships (Fan et al., 2020) 2018, the IMO also adopted the initial GHG strategy and required the international shipping reduce the annual GHG emissions by at ...

With the continuous promotion of energy saving and emission reduction policies, the development of highly efficient and low emission green ships is the priority for the industry. ...

The nation's energy storage capacity further expanded in the first quarter of 2024 amid efforts to advance its green energy transition, with installed new-type energy storage capacity reaching 35. ...

Supply chain effects of China's fast growing marine economy on greenhouse gas emissions; Marine diesel engine energy saving and emission reduction technology; Modelling ...

China has unveiled a 64,500 kW methanol-diesel dual-fuel ship engine, developed and built by subsidiaries of China State Shipbuilding Corporation (CSSC). The engine is set to be installed on a 16,000 TEU (twenty-foot equivalent unit) container vessel, which will mark its official entry into service, CSSC said in a statement published on 27 February.

Bian Guangqi, deputy director of the NEA's energy saving and technology equipment department said that by the end of 2024, the total installed capacity of new energy storage projects in China ...

This 5-day Ship Energy Efficiency Management training course was designed to lead the attendees to

implement the key principles of ship energy management within the marine industry, introduce the tools that can assist in reducing energy usage, understanding of the regulatory requirements, think of various measures that can be put in place to ...

Using Ningbo port Co. Ltd. Beilun second container terminal branch as an example, we analyze the effect of energy saving and emission reduction of CO₂ and SO₂ by clean energy alternative to...

The International Maritime Organization (IMO) has developed corresponding international regulations, including the promulgation of the International Convention for the Prevention of Pollution from Ships (MARPOL), the Ship Energy Efficiency Management Plan (SEEMP), and the Energy Efficiency Design Index (EEDI) [5].The introduction of these ...

The statement commented: "To address this issue, NYK will collaborate with Nakashima Propeller, a marine equipment manufacturer that develops and sells ship propellers, as well as energy-saving devices, and ...

The utility model provides an energy-saving and environment-friendly ship which comprises a solar-cell panel arranged on a deck of a ship body; the upper parts of the two sides of the ship body are respectively provided with a wind driven generator; the two sides of the bottom of the ship body are respectively provided with a hydroelectric generator; the ship body is internally ...

China's energy storage incentive policies are imperfect, and there are problems such as insufficient local policy implementation and lack of long-term mechanisms [7]. Since the frequency and magnitude of future policy adjustments are not specified, it is impossible for energy storage technology investors to make appropriate investment decisions

EMS is tasked with the management, allocation, and regulation of power on multi-energy ships, as well as the specific equipment control to achieve optimal power allocation for each energy source in order to meet ship power, economic, and emission requirements (Xie et al., 2022a).The advancement of green and intelligent ships has led to the gradual implementation ...

With the continuous promotion of energy saving and emission reduction policies, the development of highly efficient and low emission green ships is the priority for the industry. Hybrid (or all-electric) ships that consider multiple forms of energy storage and clean energy have the potential of energy saving which have been widely studied.
