What is a wire harness?

Usually a wire harness has multiple branches or ends that can go off in a number of directions with several terminations on each branch. The branches are sometimes made distinct by the various colors of their exterior coverings which are made from a thermoset or thermoplastic material.

What is the difference between a wire harness and a cable?

A cable is two or more conductors that wrapped in a single jacket. Unlike a wire harness several individually separated assembly encases all cable. FOR? builders use heavy-duty with thick weather resistant and plastic molded ends spec connectors. IS THE PURPOSE OF THE EXTERNAL COVERING? IS THE PURPOSE OF THE EXTERNAL COVERING?

Why do wire harnesses have different colors?

The material that covers each wire of a wire harness is there to protect you, not the actual wires. the coverings protect people and other environmental materials from harm that can be caused by the flow of electricity. The various colors also help to organize electrical systems and make it easy for technicians to navigate.
