How does a 300 MW CAES system compare to a 100 mw system?

The two teams said that, compared to the 100MW CAES system, the unit cost of 300MW CAES system decreases by more than 30 percent, helping it save about 189,000 tons of standard coal annually and reducing carbon dioxide emissions by about 490,000 tons.

How many people will a new power station support?

Industry experts said that it will provide power support for about 200,000 to 300,000 households during peak electricity hours. This new type of power station was independently developed by the Institute of Engineering Thermophysics under the Chinese Academy of Sciences and Zhongchu Guoneng (Beijing) Technology Co Ltd.
