What is the conventional unit to measure battery capacity?

Convention has us working in ampere-hours (Ah), the number of amps a battery can deliver in a certain number of hours. Ideally, the energy storage should be measured in joules, mega joules for sufficiently large battery banks.

What does battery capacity mean?

1. **Battery Capacity (Ah)** Battery capacity is a critical indicator of lithium battery performance, representing the amount of energy the battery can deliver under specific conditions (such as discharge rate, temperature, and cutoff voltage), usually measured in ampere-hours (Ah). For example, a 48V, 100Ah lithium battery has a capacity of:

What is the efficiency of a battery?

The efficiency of a battery is $\text{output/input} \times 100\%$. Initially, lead-acid batteries had an efficiency of about 75%, but this has improved over time, with some technologies reaching efficiencies of around 95%.
