

Current status of superconducting energy storage

Why is superconducting magnetic energy storage important?

The main motivation for the study of superconducting magnetic energy storage (SMES) integrated into the electrical power system (EPS) is the electrical utilities' concern with eliminating Power Quality (PQ) issues and greenhouse gas emissions. This article aims to provide a thorough analysis of the SMES interface, which is crucial to the EPS.

How is energy stored in a SMES system?

In SMES systems, energy is stored in dc form by flowing current along the superconductors and conserved as a dc magnetic field. The current-carrying conductor functions at cryogenic (extremely low) temperatures, thus becoming a superconductor with negligible resistive losses while it generates magnetic field.

Can superconducting materials improve SMES status?

Recently, the improvements in the superconducting materials have significantly upgraded SMES status in relation to other competitive storage types, such as supercapacitor and flywheel, and hybrid systems composed of SMES and battery units have emerged as a promising solution for addressing their limitations as standalone systems.

Can energy storage systems store surplus energy?

Generally, the energy storage systems can store surplus energy and supply it back when needed.

What is SMES energy storage?

One of the emerging energy storage technologies is the SMES. SMES operation is based on the concept of superconductivity of certain materials. Superconductivity is a phenomenon in which some materials when cooled below a specific critical temperature exhibit precisely zero electrical resistance and magnetic field dissipation.

Can energy storage improve power systems' resilience and cost-effective operation?

Deficiencies and gaps are identified for future improvements and research. Employment of properly controlled energy storage technologies can improve power systems' resilience and cost-effective operation. However, none of the existing storage types can respond optimally under all circumstances.
