How can a supercapacitor energy storage system reduce filter size?

A reduction in filter size is achieved by operating only in modes with duty cycles that correspond to smaller output current ripples. This leads to limited control of the charging and discharging process of the supercapacitor energy storage system.

Does a supercapacitor need a capacitor?

Since there was a supercapacitor energy storage system at the output of the DC-DC converter, there was no need to install a capacitor; only a small ceramic capacitor was used to remove small voltage spikes. Figure 35. SC energy storage consisting of 20 20 Maxwell BCAP0450 P270 S18 supercapacitors.
