Due to the inherent instability in the output of photovoltaic arrays, the grid has selective access to small-scale distributed photovoltaic power stations (Saad et al., 2018; Yee and Sirisamphanwong, 2016). Based on this limitation, an off-grid photovoltaic power generation energy storage refrigerator system was designed and implemented.

Gravitricity energy storage: is a type of energy storage system that has the potential to be used in HRES. It works by using the force of gravity to store and release energy. In this energy storage system, heavy weights are lifted up and down within a deep shaft, using excess electricity generated from renewable sources such as wind or solar.

The photovoltaic power system can be used as an electrical power source for a home to meet its daily energy requirement, through direct conversion of solar irradiance into electricity.

The energy cycle is as follows: when there is surplus energy generated by the photovoltaic system, the water is pumped into the raised reservoir and is retained thereby storing the energy in its potential form when there is energy demand and there is not enough generation in the panels to cover this demand, the water flow from the upper to the ...
