

What are the challenges of energy storage?

Therefore, the uninterrupted supply of energy is one of the greatest needs and challenges of the modern world. In this context, TES technology is positioning itself as a solution to the challenges of energy storage. Currently, the energy supply highly depends on the fossil fuels that make the environment vulnerable inducing pollution in it.

Why is it hard to store light as light?

It's hard to store light as light because the most common way light interacts with matter is through absorption and emission, which is how mirrors work. However light rays can be bent by gravity, so it would be possible to arrange several massive stars in a way such that a light ray would move in a loop around the stars without energy loss.

Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).
