#### Why do nuclear power plants need to be stored at a reactor?

Production of energy from nuclear power plants can be scheduled, but reactors work better if they can produce energy 24/7, so storage at a reactor helps nuclear keep running while storing up energy so it can fill in the gaps in a system that makes use of a lot of wind and solar.

#### What are energy storage systems (ESS) in nuclear power plants?

Energy storage systems (ESS) that are integrated with nuclear power plants (NPP) serve multiple purposes. They not only store excess energy generated during off-peak periods but also effectively manage fluctuating energy demand and mitigate safety concerns. Integrated ESS nuclear power plant yields a higher capacity factor.

#### Should energy storage be built with nuclear energy?

Additionally, energy storage has already been built with nuclear energy in mind. Ludington Pumped Hydro Storage Plant was originally built to help baseload sources in Michigan, like nuclear plants, run efficiently during off-peak hours and make the electricity more dispatchable. "If you want to decarbonize the economy, nuclear is very important.

#### Why is thermal energy storage important in nuclear power plants?

Thermal energy storage systems provide important benefits in nuclear power plants by enabling load balancing, enhancing grid stability, improving efficiency, providing backup power, and optimizing costs.

Why is nuclear energy a good investment?

Once storage technologies are large enough scale, cost-effective and efficient, it will benefit variable renewables and baseload nuclear. Keeping supply and demand in balance is good for the grid. Nuclear energy is essential to a clean energy future and can work to protect the climate alongside energy storage.

#### Could battery technology be used in nuclear power plants?

Duke Energy Corp. is currently looking into whether it's feasibleto use battery technology in nuclear plants to replace a diesel generator used for maintenance and potentially reduce the duration of maintenance outages. Additionally, energy storage has already been built with nuclear energy in mind.
