

Can EV battery life cycle management improve environmental and economic benefits?

However, maximising the environmental and economic benefits of electric vehicles depends on advances in battery life cycle management. This comprehensive review analyses trends, techniques, and challenges across EV battery development, capacity prediction, and recycling, drawing on a dataset of over 22,000 articles from four major databases.

How can EV storage potential be realized?

Given the concern on the limited battery life, the current R&D on battery technology should not only focus on the performance parameters such as specific energy and fast charging capacity, but also on the number of cycles, as this is the key factor in realizing EV storage potential for the power system.

Is repurposing EV batteries a sustainable solution?

The concept of a circular economy -- in which materials are re-used, repurposed and recycled 188 -- is gaining traction as a solution to sustainability challenges associated with electric vehicle (EV) energy storage (see the figure, part a). Repurposing EV batteries is an important approach 189.

Can EV batteries be used as energy storage devices?

Batteries in EVs can serve as distributed energy storage devices via vehicle-to-grid (V2G) technology, which stores electricity and pushes it back to the power grid at peak times. Given the flexible charging and discharging profiles of EVs and the cost reduction, V2G has been considered for short-term power grid energy storage 193.

Will eV energy storage be shaped by a single pathway?

The future of EV energy storage should not be shaped by a single pathway. The four pathways are more likely to combine and to offer a composite storage service.

Can EV storage be a cost-efficient energy system?

To realize a future with high VRE penetration, policymakers and planners need knowledge of the role of EV storage in the energy system and how EV storage can be implemented in a cost-efficient way. This paper has investigated the future potential of EV storage and its application pathways in China.
