

What is agent-based modeling in electricity market reform?

In the context of electricity market reform, this study develops an agent-based modeling framework integrated simulation with optimization. The model uses agent-based simulation to analyze annual market dynamics and low-carbon technology diffusion, with a two-stage optimization for energy storage and spot market simulation.

Can energy storage help maintain grid power supply-demand equilibrium?

However, the inherent intermittency and volatility of renewable energy sources, like wind and solar power, present challenges in maintaining grid power supply-demand equilibrium, prompting the use of flexible technologies such as energy storage as a vital supplement.

Why is China promoting energy storage at the 2025 two sessions?

The buzzword "energy storage" at the 2025 Two Sessions underscores China's strategic focus on building a resilient, sustainable, and diverse energy system, contributing new efforts to a sustainable global future. The country's progress in new-type energy storage highlights how innovation can drive both economic and environmental progress worldwide.

How much new energy storage will the NDRC have by 2025?

It has exceeded the target of installing 30GW (equivalent to 60GWh based on the 2C discharge rate, as shown in Table 1) or more of new energy storage by 2025, as proposed in the documents (Guidance on accelerating the development of new energy storage) by the NDRC and the NEA.

What is electrochemical energy storage (EES) technology?

Electrochemical energy storage (EES) technology, as a new and clean energy technology that enhances the capacity of power systems to absorb electricity, has become a key area of focus for various countries. Under the impetus of policies, it is gradually being installed and used on a large scale.

Should thermal power plant capacity be reduced?

Thus it is also necessary to simultaneously curb the expansion of thermal power plant capacity. After 2030, with the increasing share of renewable energy, energy storage becomes more critical in the operation of the power system. However, its demand is limited during specific periods.

The Federal Ministry for Economic Affairs and Climate Action (Bundesministerium für Wirtschaft und Klimaschutz, "BMWK") presented its electricity storage strategy on 8 December 2023. The strategy, which is aimed ...

Compared to the development of the industry, China's market-based power sales mechanism remains in its infancy. Although China took the necessary steps of vertically ...

This paper, based on the Fujian provincial 500 kV grid and part of the 220 kV grid and the key power plants,

including hydro, coal, nuclear, gas, wind and pumping and storage hydro powers (PSHP) connected to the grid, constructs an ...

On 14 December 2023, the Council and Parliament reached a provisional agreement to reform the EU's Electricity Market Design (EMD), with the goal of reducing dependence on volatile ...

Given energy storage's unique operational characteristics and flexibility, the Energy Storage Market Reform analysis outlines key reforms MISO, PJM, and NYISO can implement ...

Background . AEMO established the Integrating Energy Storage Systems (IESS) project under the NEM Reform Program to carry out the procedure and system changes arising from the ...

By 2030, the NEVs will become an important part of the electrochemical energy storage system, said the guideline. The guideline outlines six major tasks, including improving ...

Keywords: wind power; electricity market reform; energy storage; PSHP JEL Classification: D41; Q21; Q41
1. Introduction In the past 30 years, China's electricity market ...

Instead, energy storage should be allowed a fair and open market in which it is allowed to compete with other market entities. A sound market environment is the core for comprehensive commercial development of ...

MV Market value of the electricity . NECP National Energy and Climate Plans . NRA National regulatory authority . PHS Pumped hydropower . PPA Power Purchasing ...

The nation's energy storage capacity further expanded in the first quarter of 2024 amid efforts to advance its green energy transition, with installed new-type energy storage capacity reaching 35. ...

On March 11, 2025, the Department of Energy Security and Net Zero and Ofgem published the much anticipated Technical Decision Document (TDD) to confirm details of the cap and floor scheme for LDES.1 The scheme provides an ...

In July, the National Development and Reform Commission and the National Energy Administration co-released a guideline on power storage development. The guideline called on local governments to roll out ...

Analysis Details Electricity Market Design Reforms to Unlock the Potential of Storage . WASHINGTON, D.C., April 8, 2025 -- Today the American Clean Power Association (ACP) released an Energy Storage Market Reform ...

Energy Storage Industry Advancing Reliability Solutions Updates and reforms can make considerable improvements to electricity markets. Recently, PJM began changing its Surplus Interconnection Service (SIS)

...

Saudi Arabia and other Gulf Cooperation Council (GCC) members have a parallel agenda of electricity market reforms together with ambitious goals of renewable energy ...

Simulations based on the CGE model found that electricity market reform can improve energy structure and promote economic development (Chen and He, 2013, Jia et al., ...

These are mainly derived from NESO's net zero-aligned 2035 Future Energy ... Connections reform. The electricity network is a critical enabler for delivering clean power by ...

The Inflation Reduction Act's provisions spurred hundreds of billions in new manufacturing investments across the country, passing nearly \$600 in total private investment since it was passed in 2022. Solar energy, ...

The text emphasises energy storage as a key solution in achieving energy security and decarbonisation. EASE Head of Policy Jacopo Tosoni's statement: On the importance of ...

The market-oriented reform of electric power refers more to the market-oriented reform of electric power price. Due to the particularity of power commodities (real-time balance ...

Electricity market-oriented reform and carbon emissions trading, as the main policies implemented in China's power sector, have a profound impact on China's green and low ...

The Commission will also introduce a Strategy for Energy Storage from 2025, to ensure a harmonised approach across the EU. The result of ITRE's vote is a positive step towards a better alignment of Europe's electricity ...

the networks, including access of electricity produced from renewable energy sources. The 2018 . Renewable Energy Directive (currently under revision) also has ...

On July 23, the National Development and Reform Commission and the National Energy Administration formally issued the "Guidance" after fully soliciting suggestions from all walks of life. ... the cumulative installed capacity ...

Areeporn Asawinpongphan "In light of Thailand's goal to achieve carbon neutrality by 2050, the power sector is considered the most crucial in supporting this goal. The continuous and high rate of electricity consumption ...

The business models of energy storage and demand response rely on arbitrage opportunities: batteries or pumped storage charge when prices are low and discharge when ...

As China achieves scaled development in the green energy sector, "new energy" remains a key topic at 2025 Two Sessions, China's most important annual event outlining ...

China has been building the production, supply, storage and sales systems for coal, electricity, oil and gas, while improving energy transportation networks, storage facilities, the ...

The performance of electrochemical energy storage technology will be further improved, and the system cost will be reduced by more than 30%. The new energy storage technology based on conventional power plants and ...

Prioritized reforms address the limits of conventional market design in the face of growing reliance on variable resources, retiring fossil units, and load growth which all increase ...

New market entities are being cultivated in the fields of electricity distribution and sales, energy storage, and comprehensive energy services. Meanwhile China is extending reform of energy SOEs, supporting ...
