What is a battery energy storage system (BESS)?

The most dominant technology being deployed in recent years across the electric grid are battery energy storage systems (BESSs), which interconnect to both distribution and transmission systems.

Can FEMP assess battery energy storage system performance?

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems.

Why is ESS battery testing important?

ESS battery testing is crucial for ensuring the safety of stationary lithium-ion storage systems. These systems, which are increasingly popular due to their energy density and cyclic strength, impose special demands on safety that must be met. ESS battery testing provides multiple benefits to you as a manufacturer and to your customers.
