How to connect a battery to an energy storage inverter (rs485/can)?

Select the corresponding port based on the communication protocol between the battery and energy storage inverter (RS485/CAN), and then insert the communication cable into the port. The communication between the master and the slaves is carried out in a cascade mode, wherein one battery acts as the master while the others are slaves.

What should I do if my pytes battery is not charging properly?

Ensure that the charging voltage meets the battery's charging requirements. If not, adjust the power supply voltage to the proper range. If the battery still does not charge properly after following the steps, please contact the local reseller or Pytes. The battery cannot be discharged properly.

When should a battery be charged?

The battery should be charged within 12 hours when it's fully discharged or over-discharging protection mode is activated. Failure to follow this instruction will damage the battery and is not covered by warranty. Do not dispose of batteries in fire, as the batteries may explode.
