It enables shifting of peak electricity load to off-peak periods, helping to manage electricity prices. It provides ancillary services to the market by regulating and reserving energy, contributing to grid stability and reliability. It ...

Renewable electricity can help reduce emissions in road transport, low-temperature industrial processes and in heating buildings. However, fossil fuels have a significant advantage in applications that require high energy density, industrial processes that rely on carbon as a reactant, or where demand is seasonal.

Battery Energy Storage is needed to restart and provide necessary power to the grid - as well as to start other power generating systems - after a complete power outage or islanding situation (black start). Finally, Battery Energy Storage can also offer load levelling to low-voltage grids and help grid operators avoid a critical overload.

Renewable energy faced numerous challenges during President first term, with an average annual growth of only 400 MW. President Jokowi has stated his intention to pursue an energy transition during his second term. Despite his efforts, renewable energy addition only reached 2 GW from 2019 to 2022, bringing the total renewable
