

What is an epoxy glass board?

An epoxy glass board is a very resilient material that is extremely difficult to dent. This makes it ideal for long production runs, reducing make-ready time. The material has been designed for repeated use on different jobs without any effect on quality. Epoxy glass boards can be tested by request, or you can examine sample foiled swatches.

What are epoxy boards?

Epoxy boards, although they may appear to be new to the surf industry, have been around for quite a while. It has only become mainstream recently as the foam/glass/resin combo has been perfected. Epoxy boards will typically start with an Expanded Poly Styrene (EPS) foam blank with a PVC foam stringer.

What is the difference between GEBT-3 and neat epoxy?

In contrast, the GEBT-3 system with 0.5 wt% GO possesses the highest storage density of 0.47 J cm^{-3} at 40 kV mm^{-1} , nearly two times higher than that of neat epoxy. The enhanced energy storage is as a result of the combination of 3DBT network and 2D GO feature.
