What is Ocean battery?

Ocean Battery is a new design for an energy storage system that functions a bit like a hydroelectric dam at the bottom of the sea. Developed by Dutch startup Ocean Grazer, the Ocean Battery is designed to be installed on the seafloor near offshore renewable energy generators, like wind turbines, floating solar farms, tidal and wave energy systems.

How does energy storage work?

The energy storage system makes use of the pressure differential between the seafloor and the ocean surface. It's not a new idea, either, with Lockheed Martin making use of temperature differences between ocean levels to create energy. "Imagine opening a hatch in a submarine under water. The water will flow into the submarine with enormous force.

Can a beach ball be used as energy storage?

Anyone who's held a beach ball underwater knows how powerful a force buoyancy can be. Now it's being harnessed as a grid-scale energy storage system that could be cheaper than big batteries
