

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.\*Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

What are the characteristics of electrochemical energy storage power station?

2.2 Fire Characteristics of Electrochemical Energy Storage Power Station Electrochemical energy storage power station mainly consists of energy storage unit, power conversion system, battery management system and power grid equipment.

Can energy storage power stations monitor fire information?

Fire information monitoring At present, most of the energy storage power stations can only collect and display the status information of fire fighting facilities (such as fire detectors, fire extinguishing equipment, etc.) in the station.

How is information transmitted between fire control room and energy storage station?

The information between the fire control room and each energy storage station can be transmitted by optical cable or wireless communication, and based on the communication protocol DL/T634.5101 and DL/T634.5104, the relevant secondary equipment is deployed in the security II area.

How does a fire protection system work?

In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions. As its name implies - "aspirated" smoke and off-gas detection systems use an "aspirator" mounted in a detector unit.

Are energy storage systems a fire risk?

However, a number of fires occurred in recent years have shown that the existing regulations do not show sufficient recognition of the fire risks of energy storage systems and specific fire early warning methods and fire-fighting measures have not yet been developed.
