

Energy Conversion and Management, 101, 278-284. in wax/expanded graphite phase change composite for thermal energy storage applications have been validated. Future ...

In this paper, the effect of the expanded graphite (EG) matrix on the phase transitions enthalpy of phase change material (PCM) is studied experimentally. For this ...

Mesophase pitch based graphite foams (GFs) with different thermal properties and pore-size were used to increase the thermal diffusivity of phase change material (PCM), ...

Thermal energy storage system using a technical grade paraffin wax as latent heat energy storage material. Energy Source, 27 (16) (2005), pp. 1535-1546. Crossref View in ...

graphite-paraffin composites Sathiyaraj. R1, Rakesh. R1, Mithran. N1, and Venkatesan. M1* 1School of Mechanical Engineering, SASTRA Deemed University, Thanjavur - 613401 ...

The available literature data on different TES materials show the importance of energy storage in drying applications. A lot of TES materials such as paraffin wax [8], [9], [10], ...

A simple but novel phase change composite using paraffin wax and graphite sheet ... Enhanced thermal conductivity of phase change materials with ultrathin-graphite foams for ...

Paraffin waxes are organic phase change materials possessing a great potential to store and release thermal energy. The reversible solid-liquid phase change phenomenon is the under-lying mechanism enabling the ...

References [1] S. Kim, L.T. Drza, High latent heat storage and high thermal conductive phase change materials using exfoliated graphite nanoplatelets, Sol. Energy ...

Paraffin waxes are intrinsically reliable latent heat-based thermal reservoirs. However, low thermal transport properties restrict their applications in various systems. In ...

Influence of graphite nano powder on ethylene propylene diene monomer/paraffin wax phase change material composite: Shape stability and thermal applications. ...

The performance of paraffin wax based latent heat energy storage systems (LHESS) is limited by its poor thermal conductivity. In this paper, the previous experimental ...

In recent years, porous graphite matrices have been used to improve thermal conductivity of paraffins. Py et

al. was prepared the composite of paraffin (m.p.: 73-80 ...

In this work, expanded graphite/paraffin/silicone rubber composite phase-change materials (PCMs) were prepared by blending the expanded graphite (EG), paraffin wax (PW) and silicone rubber (SR) matrix. It has been ...

Paraffin wax/expanded graphite (EG) compositions with EG mass fractions of 2%, 4%, and 6% were analysed. ... The thermal energy storage applications included Photovoltaic ...

PW-EG composite phase change materials (CPCMs) with varying expanded graphite (EG) mass fractions were prepared by vacuum adsorption, using EG as the matrix ...

PW-EG composite phase change materials (CPCMs) were prepared by vacuum adsorption using expanded graphic (EG) as carrier and paraffin wax (PW) as the phase ...

In this study, we present an ultrafast (several minutes) and energy-efficient one-pot encapsulation method for in situ encapsulation of paraffin wax (PW) within the pores of ...

Phase change materials fabricated from high density polyethylene (HDPE) blended with 40 or 50 wt% commercial wax (melting point of 43.08 °C) and up to 15 wt% expanded ...

Phase change materials based on graphite-filled wax/polyethylene blends could find application as thermal energy storage materials. Such compounds, comprising wax to ...

In this research, a novel phase change material (NPCM) sphere was developed and its application in a packed-bed thermal energy storage (PBTES) system during thermal ...

Paraffin with 5 °C phase change temperature (Pn5) was employed as the phase change material (PCM). It was integrated into graphite, expanded graphite, and two types of ...

Paraffin is a phase change material (PCM) commonly used for energy storage-related applications. Paraffin wax exhibits slow thermal response due to low thermal conductivity ...

Soy wax and paraffin wax: carbon nanofiber (CNF) and carbon nanotube (CNT) ... Palmitic-stearic acid/graphene nanoplatelets/ expanded graphite composite: The thermal ...

For instance, heat of fusion increased up to 5...7 % due to the adding 0.5...1.0 % wt. of expanded graphite in paraffin wax (PW) [11]. In [18] was reported increase the heat of ...

Thermal energy storage composites with preformed expanded graphite matrix and paraffin wax for long-term cycling stability and tailored thermal properties. ... High-performance ...

Paraffin wax-graphite foam (P-wax/G-foam) composite was fabricated by using low cost small scale process aiming to produce a stable phase change material with enhanced ...

Paraffins are useful as phase change materials (PCMs) for thermal energy storage (TES) via their melting transition, T_{mpt}. Paraffins with T_{mpt} between 30 and 60 °C have ...

Effects of graphite microstructure evolution on the anisotropic thermal conductivity of expanded graphite/paraffin phase change materials and their thermal energy storage ...

Latent thermal energy storage (LTES) using phase change material (PCM) is one of the most preferred forms of energy storage, which can provide high energy storage density, ...

Here, we introduce a preform-type expanded graphite (EG)/paraffin wax composite possessing highly robust heat transfer and storage properties even after 10,000 ...

Paraffin wax/expanded graphite (PW/EG) composite PCMs with the EG mass fraction of 2%, 4%, and 6% were prepared by absorption of molten organic material into the ...
