What is the future of energy storage in Norway?

Hydropower accounts for 90%, and 1.4 GW of micro pumped hydro storage capacity has been installed, with limited demand for battery energy storage. Norway's poor lighting conditions, residential PV and energy storage development are limited, the future market may mainly focus on the outlying island microgrid.

Are grid-side energy storage projects a good idea in Belgium?

Grid-side energy storage projects in Belgium have good prospects, thanks to low grid charges, no double charging policies, and diversified revenue sources. In 2023, 11 new battery projects in Belgium have been awarded capacity market contracts, totaling more than 363 MW.

What is the future of energy storage in Finland?

The Finnish energy storage market is expected to grow from 185 MW in 2023 to 1 GW in 2030, mainly focused on grid-side storage. With the growth of wind power capacity, especially offshore wind power, the demand for large-scale energy storage systems on the grid will increase.
