## **SOLAR** PRO. Energy storage pdu distribution system

What is a power distribution unit (PDU)?

A power distribution unit (PDU) is a device that distributes power to various pieces of IT equipment in a data center. It is responsible for managing the data center's power supply to ensure that the IT equipment has a consistent and dependable power supply. Facilities employ PDUs to monitor, control, and optimize power distribution.

#### How does a data center power a PDU?

A data center's electricity first goes through the Uninterruptible Power Supply (UPS) and then to the Power Distribution Unit (PDU). The PDU is responsible for distributing the power to various equipment in the data center.

#### How do energy storage systems work?

As a regulating device to assist grid operations, energy storage systems can dispatch power between generator, renewable energy, transmission, and distribution networks, thus mitigating pressure caused by imbalances between supply and load on the grid.

#### What is an UPS system?

UPSSystems The core component of any mission critical system. Universal Power represent the best in the industry and can help choose the proper UPS and all components required to build a power distribution system. How can we help?

#### What is Delta Battery energy storage system (BESS)?

Delta's lithium battery energy storage system (BESS) is a complete system designwith features like high energy density, battery management, multi-level safety protection, an outdoor cabinet with a modular design. Furthermore, it meets international standards used in Europe, America, and Japan.
