What is a battery energy storage system?

"BATTERY ENERGY STORAGE SYSTEM (BESS)" - Stationary equipment that receives electrical energy and then utilizes batteries to store that energy to supply electrical energy at some future time. The BESS, at a minimum consists of one or more modules, a power conditioning system (PCS), battery management system (BMS) and balance of plant components.

What are electrochemical energy storage tests?

The tests in this standard are extreme abuse conditions conducted on electrochemical energy storage devices that can result in fires, explosions, smoke, off gassing of flammable and toxic materials, exposure to toxic and corrosive liquids, and potential exposure to hazardous voltages and electrical energy.

What temperature should a battery management system be used to test?

Electronics and software controls such as the battery management system (BMS) are not relied upon for this testing. Ambient indoor laboratory conditions shall be 25 \pm 5°C (77 \pm 9°F) and 50 \pm 25% RH at the initiation of the test.
