26.1 Introduction. A supercapacitor is a high-capacity energy storage device, which exhibits high power density, long cyclic stability, and rapid charging/discharging efficiency. The power density of supercapacitors is about one thousand times higher than that of rechargeable batteries. In addition, the supercapacitors can store much more energy than dielectric capacitors [1].

Additionally, SCs stand out as they bridge the gap between batteries and capacitors. SCs offer several advantages over conventional capacitors and batteries, including a longer cycle life owing to their faster charging-discharging time, reversible charge storage mechanism at the surface, and higher power density [15].
