

What is energy storage system?

The energy storage system could play a storage function for the excess energy generated during the conversion process and provide stable electric energy for the power system to meet the operational needs of the power system and promote the development of energy storage technology innovation.

What is a mobile energy storage system?

A mobile energy storage system is composed of a mobile vehicle, battery system and power conversion system. Relying on its spatial-temporal flexibility, it can be moved to different charging stations to exchange energy with the power system.

How does battery energy storage affect power system stability?

Ultimately, the power system's emergency response capability to face an N-1 is reduced, which leads to a reduction in system stability. Therefore, the application technology of the battery energy storage system is used to support the impact of changes in the new power system structure.

How can a battery energy storage system support changes in power system structure?

Therefore, the application technology of the battery energy storage system is used to support the impact of changes in the new power system structure. This paper designed control technologies based on the WECC second-generation generic model, namely, dynamic regulation, steady regulation, and virtual inertia regulation.

What is a mobile energy storage system (MESS)?

During emergencies via a shift in the produced energy, mobile energy storage systems (MESSs) can store excess energy on an island, and then use it in another location without sufficient energy supply and at another time, which provides high flexibility for distribution system operators to make disaster recovery decisions.

What is the energy of battery energy storage system under virtual inertia strategy?

In the light load scenario, the energy of the battery energy storage system under the virtual inertia strategy is 13.40 MJ. In the peak load scenario, the energy of the battery energy storage system under the virtual inertia strategy is 10.73 MJ.
