

What are shared energy storage applications?

Shared energy storage applications are dominant in various aspects of the power system, including the generation side, grid side, and user side. In the context of user-side applications, there has been wide research conducted on the involvement of shared energy storage systems in power system operations.

Can shared energy storage be implemented in power generation side?

The proposed operation and cost-sharing model is anticipated to serve as a useful reference for the widespread implementation of shared energy storage in power generation side.

Can a centralized shared energy storage mechanism be implemented in power generation side?

5. Conclusions and future research directions This paper proposed the implementation of a centralized shared energy storage mechanism in power generation side, which enables multiple renewable energy power stations to collaborate and invest in a shared energy storage system.

What is a shared energy storage-assisted power generation system?

3. Combined operational and cost allocation models for shared energy storage-assisted power generation systems Here, the power generation system comprises a collection of renewable energy power stations ( $n = 1, 2, \dots, n, \dots, N$ ), specifically wind power plants and photovoltaic power plants, which are connected to a shared energy storage power station.

How do energy storage systems work?

1.1. Literature review Energy storage systems are effectively integrated into various levels of power systems, such as power generation, transmission/distribution, and residential levels, in order to facilitate capacity sharing and time-based energy transfer. This integration promotes the consumption of renewable energy.

Why do energy storage facilities need to be shared?

Owing to the limited power generation capacity of the newly set renewable energy power stations, as well as the economic constraints and use of self-owned energy storage, it becomes necessary for multiple entities to collectively invest in and share the energy storage facilities.
