To face these challenges, shared energy storage (SES) systems are being examined, which involves sharing idle energy resources with others for gain [14]. As SES systems involve collaborative investments [15] in the energy storage facility operations by multiple renewable energy operators [16], there has been significant global research interest and ...

In Ref. [15], a Distributed Energy Resources Customer Adoption Model was introduced to determine the optimal size and operating schedules of the thermal energy storage, and simulation results indicated that the thermal energy storage with optimal size was effective to reduce annual electricity cost and peak electricity consumptions.
