How is energy stored in a storage medium (TES)?

In TES, the energy stored is transferred to the storage medium where it changes into an internal energy which can happen in the form of sensible heat or latent heat, or a combination of both (Sharma and Sagara 2005).

Which PCM is best for thermal energy storage?

The heat capacity of TES tanks using RT30, RT28, WAX, RT58, and P56-58 as PCMs was calculated and compared. The results showed that the TES tank using RT58 as the PCM had the highest heat capacity, indicating that RT58 is a highly effective PCM for thermal energy storage.
