

Can longer duration storage support a future energy system?

Longer duration storage can support a future energy system with high proportions of renewable energy by providing flexible energy supply and demand, and increasing the resilience of energy networks.

Is energy storage the future of energy?

According to Young, "Energy storage is emerging as a key energy resource" at various levels of the energy grid. It holds "incredible potential" when paired with "baseload, reliable, emissions-free nuclear power".

Will FTSE 100 abandon its pledge to reduce oil & gas production?

As my colleague Tom Wilson reports, people familiar with the plan say the FTSE 100 group will abandon its pledge to reduce oil and gas production, and announce at least one major divestment. Any move is unlikely to satisfy all shareholders.

Battery storage is now regarded as a key component in the decarbonisation of energy and transport. For that to happen the technology and their circularity has to keep improving Capacity to store ...

Taking place in Jakarta--a key hub in the Asia-Pacific region and a nexus of the global energy transition--the FT & Nikkei Energy Transition Summit: Asia offers an unparalleled platform to...

BYD Energy Storage will supply new-generation MC Cube-T ESS that adopt its globally pioneering CTS (Cell-to-System) super-integrated technology, with a Vct's (proportion ...

AES started work on lithium-ion energy storage in 2007, and now Fluence is one of Wall Street's favourite companies as it hopes to benefit from booming electricity demand underpinned by ...

The 230-tonne metal cylinder emits a roaring hum as it spins at 600 revolutions per minute, driving a pump buried underground that brings new meaning to the idea of pushing water up a hill.

COP29 host skips over fossil fuels to waste methane and energy storage. ... The Financial Times and its journalism are subject to a self-regulation regime under the FT Editorial Code of Practice.

The world's 179GW of pumped storage hydro capacity, which forms 90 per cent of overall installed global energy storage, is expected to increase by almost 50 per cent to about 240GW by the end of ...

"The underutilisation of batteries by the ESO [National Grid's electricity system operator] risks reducing investment," Guest told the Financial Times, adding that this was "throttling the ...

Large energy companies and factories in industrial hubs in the north of England want to develop carbon

capture technology that would connect directly to pipelines and carbon storage sites, but are ...

Battery energy storage systems: a complex but promising route to clean-energy transition For investors, excitement in the renewable energy landscape is palpable.

Latest Gresham House Energy Storage Fund PLC (GRID:LSE) share price with interactive charts, historical prices, comparative analysis, forecasts, business profile and more.

The Energy Trilemma: How energy policies can cut emissions and bills. ... Understanding carbon capture and storage. Despite the sceptics, CCS is set to play a vital part in helping the world's economies reach net-zero carbon ...

"Of all the energy events, fairs and conferences I've attended during the past years, the Financial Times Energy Transition Summit has the most to offer." ... Technological Innovation and Infrastructure Focusing on cutting-edge technologies driving the energy transition, such as energy storage, AI, smart grids, and the role of digital ...

Japan's TDK is claiming a breakthrough in materials used in its small solid-state batteries, with the Apple supplier predicting significant performance increases for devices from wireless ...

For example, US energy technology company Enphase Energy makes microinverters, which are storage tools that are crucial to the solar ecosystem as they convert electricity for use on grids.

ENERGYNEST, the global leader in thermal storage, has signed a commercial agreement with LEONHARD KURZ, a world-leading family business in thin-film technology, to implement an innovative power-to-heat solution with ...

Grid and storage capacity has, however, fallen behind the growth in renewable energy sources across the world, as a report from the International Energy Agency said on Wednesday.

Energy storage aims to stockpile excess energy when conditions for renewables are optimal, using options such as batteries, then discharge it as necessary. ... The Financial Times and its ...

The EU plans to relax its intermediate gas storage refilling targets for member states, as it tries to reduce market disruption that had disincentivised countries from stocking up for the winter.

The Long Duration Energy Storage Council, launched last year at COP26, reckons that, by 2040, LDES capacity needs to increase to between eight and 15 times its current level -- taking it to 1.5-2 ...

Over the past five years, the total capacity of Europe's solar farms has more than doubled from 127GW to 301GW, while wind capacity has climbed from 188GW to 279GW, according to energy think ...

The UK is pioneering a new way to store power with the world's first grid-scale liquid air energy storage plant. The Pilsworth liquid air energy storage (LAES) plant, which is owned by Highview ...

Private equity firms have invested more than \$100bn in America's energy transition since the IRA was passed in 2022, the great majority of which has been in energy production. Energy...

By 2030, China is expected to have 2,700 gigawatts of renewables and more than 300 gigawatts of battery storage, he said. Depending on the technology, energy storage can ...

Could battery storage help with the US energy crisis? From 2020 to 2021, the amount of energy storage capacity in the US tripled. As the grid transitions to renewable energy sources, it needs...

This capability has long existed through pumped storage hydro plants -- or water batteries -- which use power at times of excess production to push water uphill, from one reservoir to a second ...

Energy storage at a scale to power whole towns or cities is an essential part of the transition to net zero ... The Financial Times and its journalism are subject to a self-regulation regime under ...

John Shepherd, sub editor. Veteran energy journalist John Shepherd joined the team of Batteries International at the start of February. Shepherd, who has four decades of experience running print and digital news and business titles ...

Renewable energy and battery storage site developers are warning that a wait of up to 13 years to connect to Britain's energy grid is threatening investment and undermining the shift away from ...

Renewable energy capacity is being added to the world's energy systems at the fastest rate in two decades, prompting the International Energy Agency to revise its forecasts ...

UK energy group Highview Power plans to raise £400mn to build the world's first commercial-scale liquid air energy storage plant in a potential boost for renewable power generation in the UK.

Thermal energy storage Malta, a company backed by Bill Gates' Breakthrough Energy Ventures, stores energy as heat in the form of molten salts. The company says the technology can last longer ...
