

What is Elisa's distributed energy storage solution?

Elisa to accelerate Distributed Energy Storage solution - Europe's largest distributed virtual power plant in the making in Finland. If you'd like to hear more about Elisa's Distributed Energy Storage solution, leave your contact details here and someone from the team will be in touch shortly.

Can AI-driven distributed energy storage save Elisa money?

Now its AI-driven Distributed Energy Storage (DES) has gone live in Finland and it is not only saving Elisa money, it's also having the unforeseen benefit of knocking a few percentage points off the average Finn's electricity bill.

What percentage of Finland's Electricity is generated by wind turbines?

In 2022, 14.1% of Finland's electricity was generated by wind turbines with a collective capacity of almost 5.7 GW; (+76%). That capacity is expected to increase to almost 9 GW by 2025.

Is Fingrid a 'largest telecomms service provider' in Europe?

Fingrid has invested in a digital/telecomms service provider to develop and 150MWh VPP, what they are calling the largest in Europe.

Developing the Distributed Energy Storage solution was set up as an internal startup that operates within the Elisa company structure. The research that led to its founding started in 2021, well before the current energy crisis. ...

Finland's Elisa has developed a cloud-based system to make its RAN part of the nation's renewable energy infrastructure. Around two years ago the Finnish service provider Elisa saw a business case for making its mobile ...

Finnish telecommunications and digital services provider Elisa has been granted EUR3,9 million (\$4.1 million) from the Finnish Government to roll out their Distributed Energy Storage (DES) solution with an extended capacity of ...

Cactus operates a fleet of distributed energy storage systems made from re-used Tesla EV batteries and its own proprietary cloud-based control software. Each Tesla EV battery is disassembled, inspected, and ...

Elisa - Distributed Energy Storage (DES) Reduced CO₂e (tCO₂e) 20 000. Elisa's mobile base station power supply reserve supporting renewable electricity production. In practice, a virtual power plant charges base station batteries ...

It provides two key benefits: It allows the company to optimize the time of energy consumption at its base

stations, helping to control costs when energy prices fluctuate. It can also provide reserve capacity and grid ...

DNA Tower Finland, a company building and maintaining the mobile network infrastructure in Finland, is to join Elisa in using its Distributed Energy Storage (DES) solution.

"Smart electricity storage and distributed energy production are key factors in the transition towards a more flexible and efficient energy system," says Tero Ojanperä; of Rando ...

Elisa claims DES enables participants to make more efficient use of stored surplus technology, both as an additional reserve market revenue stream and by optimising their own power procurement. Indeed, Elisa says ...

Detailed info and reviews on 90 top Energy companies and startups in Finland in 2025. Get the latest updates on their products, jobs, funding, investors, founders and more. ...

In addition, telecom operator Elisa also plans to install a 150MWh battery energy storage system at its site, which will further promote the development of the Finnish energy storage market. However, Sweden is more ...

The Finnish startup provides a full-service fleet of distributed energy storage systems based on smart energy storage units and a cloud computing service. How does it ...

The Finnish government has granted Elisa EUR3.9 million (\$4.2m) in funding for the rollout of its Distributed Energy Storage (DES) solution across its network. According to the operator, it will create Europe's largest distributed ...

Elisa is well known as Finland's leading teleoperator and has been steadily acquiring a growing reputation as a provider of innovative and exciting software solutions. The ...

Elisa's distributed virtual power plant integrated to telecom infrastructure is the first in the world. All control system software and AI/ML modules are implemented by Elisa, and the system is compatible with several globally leading power ...

Cactus operates a fleet of distributed energy storage systems based on smart energy storage units and a cloud computing service. The energy storage units are made from ...

The increasing amount of VRES in Finland, mainly wind but also solar photovoltaics (PV) [5], creates challenges to the power system, and the mismatch between the timing of ...

AES is a global energy company that creates greener, smarter and innovative energy solutions. Together, we

can accelerate the future of energy. ... The new Solar + Storage energy project that will help Hawaii become 100% ...

Today Finnish telecoms and digital services company Elisa is announcing its intention to enable international telecoms operators to play a key part in tackling climate change by storing surplus renewable energy and ...

Fluence delivers comprehensive energy storage services built on lessons learned from 14+ years of energy storage deployment and services experience. ... enables customers to minimize risk and rely on Fluence's expertise in asset ...

"Last summer we conducted testing with Fingrid (Finland's electricity transmission systems operator) across 200 of our base stations. It was successful and as a result, in the summer of 2022, we received the technical ...

Based in Muhos in northern Finland, Cactos operates a fleet of distributed energy storage systems based on smart energy storage units and a cloud computing service. The units are made from used Tesla EV batteries. ...

operators, distribution companies and various service providers are integrating o Finnish model is field-based approach with joint action groups. The aim is to compile best ...

DNA Tower Finland partners with Elisa to integrate distributed energy storage, reducing carbon emissions and enhancing network resilience. Partnership between DNA Tower Finland and Elisa...

Figure 1 Range of services offered by energy service providers Source: Adapted from Edison Energy, 2016; Eneco, 2019 Renewable energy and energy storage system Microgrids set-ups ...

This home energy storage service connects residential batteries to Elisa's battery reserve, which provides grid-balancing services that improve the stability of the entire Finnish ...

Finish telcom operator Elisa has been selected to provide optimization services for a landmark 1 MW/100 MWh thermal energy sand-based storage system developed by ...

Distributed energy storage is a solution for balancing variable renewable energy such as solar ... for an energy technology for providing balancing services in Finland is a minimum power output

Europe's telecommunications sector has the potential to deploy 15GWh of distributed energy storage (DES), halving its energy costs and helping the energy transition, Finnish telecoms firm Elisa said discussing its new DES ...

Around two years ago the Finnish service provider Elisa saw a business case for making its mobile network part of the national virtual power plant (VPP) infrastructure. Now its AI-driven Distributed Energy Storage

(DES) ...

Battery storage projects in Finland are mainly focused on an ancillary services market of around 400MW, with around 100MW of operational batteries playing in the market ...

Electricity network operations are a licensed monopoly supervised by the Energy Authority. The Energy Authority ensures the reasonableness of pricing in electricity distribution and grants the electricity network licences in Finland. ...
