What is a magnetic bearing in a flywheel energy storage system?

In simple terms, a magnetic bearing uses permanent magnets to lift the flywheel and controlled electromagnets to keep the flywheel rotor steady. This stability needs a sophisticated control system with costly sensors. There are three types of magnetic bearings in a Flywheel Energy Storage System (FESS): passive, active, and superconducting.

What are the main bearing loads in an automotive flywheel energy storage system?

How does a flywheel energy storage system work?

... The input energy for a Flywheel energy storage system is usually drawn from an electrical source coming from the grid or any other source of electrical energy. As more energy is imparted into a flywheel it speeds up as it stores more energy and slows down when it loses the said energy , .

What type of bearing does a stationary flywheel use?
