How fast is a flywheel energy storage device for a 30 MW wind farm?

The high-frequency component of the wind power output power data accounts for less than 10 % of the total energy. Therefore, this study selects a 100 MJ/0.3 MW flywheel energy storage device for a 30 MW wind farm, and the rated speed of the flywheel is 4000 r/min.2.2. Energy storage systems

How a flywheel energy storage action is controlled?

The energy storage is controlled by the control signal for the next action. To better show the control effect of the energy storage action, the positive direction of the y-axis is used to denote the flywheel energy storage absorbing energy, while the negative direction of the y-axis indicates the flywheel energy storage releasing energy.
