

Frontier energy storage technologies at home and abroad

Do we need energy storage solutions?

"We need energy storage solutions to make them permanent," says researcher and electric battery expert Philippe Knauth in an interview for bbva.com. He also points out that the democratization of energy depends on "the combination of renewable energies and energy storage."

Why is China promoting energy storage at the 2025 two sessions?

The buzzword "energy storage" at the 2025 Two Sessions underscores China's strategic focus on building a resilient, sustainable, and diverse energy system, contributing new efforts to a sustainable global future. The country's progress in new-type energy storage highlights how innovation can drive both economic and environmental progress worldwide.

Are energy storage systems safe?

Yet energy storage systems have their hurdles. "They do not last long enough. Some materials, like cobalt, are toxic; others are scarce. Most must be mined, which adds to carbon emissions," he says. Today, lithium batteries are the most common. Their key strength is their high energy density, both by weight and by volume.

What is new-type energy storage?

This year, "new-type energy storage" has emerged as a buzzword. Unlike traditional energy, new energy sources typically fluctuate with natural conditions. Advanced storage solutions can store excess power during peak generation and release it when needed, enabling greater reliance on renewables as a primary energy source.

Chapter 1 introduces the definition of energy storage and the development process of energy storage at home and abroad. It also analyzes the demand for energy storage in ...

global demand for new energy products, services and technologies has been surging. Overseas markets are becoming an important point of leverage for Chinese new ...

Our study reveals 19 research frontiers in ESTs distributed across four knowledge domains: electrochemical energy storage, electrical energy storage, chemical energy storage, and...
