For each technology, the basic principle is firstly clarified and then system structures and storage devices are summarized. Thereafter, the corresponding demonstrations and costs of different routes are sorted out.

Is energy storage a key technology for achieving the 'dual carbon' goal?

Energy storage is a key technology for achieving the 'dual carbon' goal and the development of energy storage is of high strategic importance. Compared to other storage technologies, the thermodynamic electricity storage technology represented by CAES, CCES and PTES is more suitable for large-scale and long-term storage.

Why do we need electricity storage?

Compared with heat and cold energy, electricity is more suitable for long-distance transmission. Therefore, in the grid side, electricity storage must be carried out to solve the large difference between peak and valley power and increase the share of renewable energy generation.
