# Gravity energy storage economic calculation questions and consultation

How do you calculate the cost of gravity energy storage?

To calculate the levelized cost of gravity energy storage, the system investment cost is found by adding all relevant construction and equipment costs for the installation of the system. This calculation takes into consideration the time value of money with a discount rate over the system lifetime.

#### Do different sized gravity energy storage systems improve economic performance?

To investigate the economic performance of differently sized gravity energy storage systems, a wind farm with a number of gravity energy storage units has been used. The principle of economies of scale has been applied resulting in a cost reduction for large scale systems.

#### Is gravity energy storage an attractive energy storage option?

Interest in energy storage systems has been increased with the growing penetration of variable renewable energy sources. This paper discusses a detailed economic analysis of an attractive gravitational potential energy storage option, known as gravity energy storage (GES).

#### How to calculate financial feasibility of gravity energy storage project?

Life cycle cost analysisTo calculate the financial feasibility of gravity energy storage project, an engineering economic analysis, known as life cycle cost analysis (LCCA) is used. It considers all revenues, costs, and savings incurred during the service life of the systems. The LCC indicators include NPV, payback period, and IRR.

#### What is gravity energy storage system?

Gravity energy storage system is an innovative energy storage concept based on the same principle as PHES. This system has attracted attention lately due to the many benefits it provides as it does not require any special geographical requirement [39].

#### How much does gravity energy storage cost?

Depending on the considered scenarios and assumptions, the levelized cost of storage of GES varies between 7.5 EURct/kWh and 15 EURct/kWh, while it is between 3.8 EURct/kWh and 7.3 EURct/kWh for gravity energy storage with wire hoisting system (GESH). The LCOS of GES and GESH were then compared to other energy storage systems.
