

# How can investors get their money back when investing in energy storage

Are energy storage funds a good investment?

As nuclear and coal power plants are decommissioned, with a growing increase in intermittent renewable energy generation, energy storage funds have become an attractive investment proposition. Battery energy storage systems (BESS) allow energy from renewables to be stored and then released when customers need power most.

Should Savers invest in energy storage?

As interest in the sector grows, so too do some of the options for savers to invest in and a number of investment trusts are targeting an area of the market considered essential for the future of green power-energy storage.

Are energy storage stocks a good investment?

Many of the best energy storage companies have predictable cash flows, which makes them a safer bet. Some of these companies pay out dividends, and others invest a significant amount of their earnings into R&D. Energy Storage Stocks can be one of the smartest investments you can make for your future.

Why is energy storage important?

For individual customers like companies and homeowners, it also offers the certainty of backup when the grid fails. The grid won't switch to 100% renewable energy soon, but energy storage ensures an immense amount of renewables than today is possible.

What are the primary ways to repay an investor?

There are a few primary ways you'd repay an investor: Ownership buy-outs: You purchase the shares back from your investor depending on the equity they own and the business valuation. Most angel investors will hold onto their shares until the business is sold--if that happens.

What are energy storage stocks?

Energy storage stocks are companies that produce or develop energy storage technologies, such as batteries, capacitors, and flywheels. These technologies can store energy from renewable sources like solar and wind power, or from traditional sources like coal and natural gas.
