What is ABB Energy Storage Control System?

The flow of energy is controlled by ABB's dynamic Energy Storage Control System. It enables several new modes of power plant operation which improve responsiveness, reliability, safety, and fuel consumption. The system also provides a shore connection with frequency conversion, allowing the vessel to connect to 50 or 60 Hz shore power.

How does energy storage work?

The energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

What is battery energy storage?

Energy storage, and specifically battery energy storage, is an economical and expeditious way utilities can overcome these obstacles. Battery energy storage solutions (BESS) store energy from the grid, and inject the energy back into the grid when needed.

What is ABB Ability?

ABB Ability provides the services and solutions that integrate systems on land, sea and air. From collaborative operations to remote monitoring, motion forecasting and energy management, ABB Ability enables vessel operators to know more, do more, and do better, together.
