How does battery energy storage work?

This blog explains battery energy storage, how it works, and why it's important. At its core, a battery stores electrical energy in the form of chemical energy, which can be released on demand as electricity. The battery charging process involves converting electrical energy into chemical energy, and discharging reverses the process.

What is battery energy storage?

In the transition towards a more sustainable and resilient energy system, battery energy storage is emerging as a critical technology. Battery energy storage enables the storage of electrical energy generated at one time to be used at a later time. This simple yet transformative capability is increasingly significant.

What are the components of a battery energy storage system?

The components of a battery energy storage system generally include a battery system, power conversion system or inverter, battery management system, environmental controls, a controller and safety equipment such as fire suppression, sensors and alarms. For several reasons, battery storage is vital in the energy mix.

How long can a battery store and discharge power?

The storage duration of a battery is determined by its power capacity and usable energy capacity. For example, a battery with 1MW of power capacity and 6MWh of usable energy capacity will have a storage duration of six hours.

What is the storage duration of a battery?

The storage duration of a battery is the amount of time it can discharge at its power capacity before exhausting its battery energy storage capacity. For example, a battery with 1MW of power capacity and 6MWh of usable energy capacity will have a storage duration of six hours.

Why is battery storage important?

For several reasons, battery storage is vital in the energy mix. It supports integrating and expanding renewable energy sources, reducing reliance on fossil fuels. Storing excess energy produced during periods of high renewable generation (sunny or windy periods) helps mitigate the intermittency issue associated with renewable resources.
