

How long do Muller energy batteries last?

Long-term use is made possible by the batteries' rated cycle life of thousands of cycles, however like other lithium batteries, there is some capacity loss over time. What's the best way to store Muller Energy batteries when not in use? To extend its life, the Muller Energy battery should be kept in a cool, dry location at 50% charge.

How long does a Muller energy battery take to charge?

Please contact our friendly team for advice specific to your situation. How long does the Muller Energy battery take to fully charge? With a suitable lithium charger, the battery usually charges in 4-6 hours, depending on the charger and setup. Do Muller Energy batteries lose capacity over time?

Do Muller energy batteries run on solar?

Our Muller Energy batteries are actually designed to run on solar power. They can be connected to solar systems in RVs and caravans. They are perfect for off-grid solar power because of their quick charging times and great efficiency (even in partial shade). What is the discharge rate of your lithium Muller Energy batteries?

Do Muller energy batteries need maintenance?

Muller Energy batteries don't need maintenance, unlike lead-acid or AGM batteries, which may require regular inspections. How do Muller Energy batteries handle deep discharge cycles? Even during extensive discharge cycles, the Muller Energy batteries function effectively, preserving their lifespan and capacity.

Does Muller energy have a monitoring system?

Yes, there are Bluetooth-enabled monitoring systems included with our Muller Energy batteries. A specialised smartphone app allows you to monitor battery statistics in real time, such as temperature, voltage, and state of charge (SoC). What are the best practices for extending the lifespan of my lithium Muller Energy battery?

What temperature should a Muller energy battery be stored?

Temperature: For best results, keep the Muller Energy battery between 10°C and 30°C. Storage: To avoid deterioration, keep the Muller Energy battery at about 50% state of charge (SoC) if you won't be using it for a long time.
